## Never worry about the extra effort and potential revenue loss from a warranty audit again. Go paperless and automate with docMgt!

Warranty audits require a large number of supporting documents, and way too often these audits result in lost revenue and charge backs. Does your staff spend way too much time looking through paperwork for the right supporting documents to satisfy your warranty claims? We can help you solve that problem!

With goIDit you can capture all of your repair orders, service tickets, and parts documents. goIDit indexes all of these to provide instant access and to prevent missing, misfiled or lost documents.

goIDit also automatically validates that all the required warranty documentation is accounted for. If there are any missing documents, goIDit can automatically send a request to the right person to fix it.

goIDit significantly reduces the time needed to manage all of these documents which frees your staff to spend more time on revenue-generating activities.

### Document processes are automated & improved!

- Scan all of your documents and securely store them in the cloud.
- Documents are indexed for instant access.
- Document requirements are validated.
- Missing document notifications are sent.
- Follow ups are automated to ensure compliance.
- Audit requests can be fulfilled instantly

### New!

goIDit also provides a sensor based solution for tracking and finding all of your keys so that you never waste time and money finding or replacing them.

## Going paperless and implementing workflow allows you to reduce costs and be more competitive.

Contact us today to learn how you can improve your document processes and improve your cash flow!
